

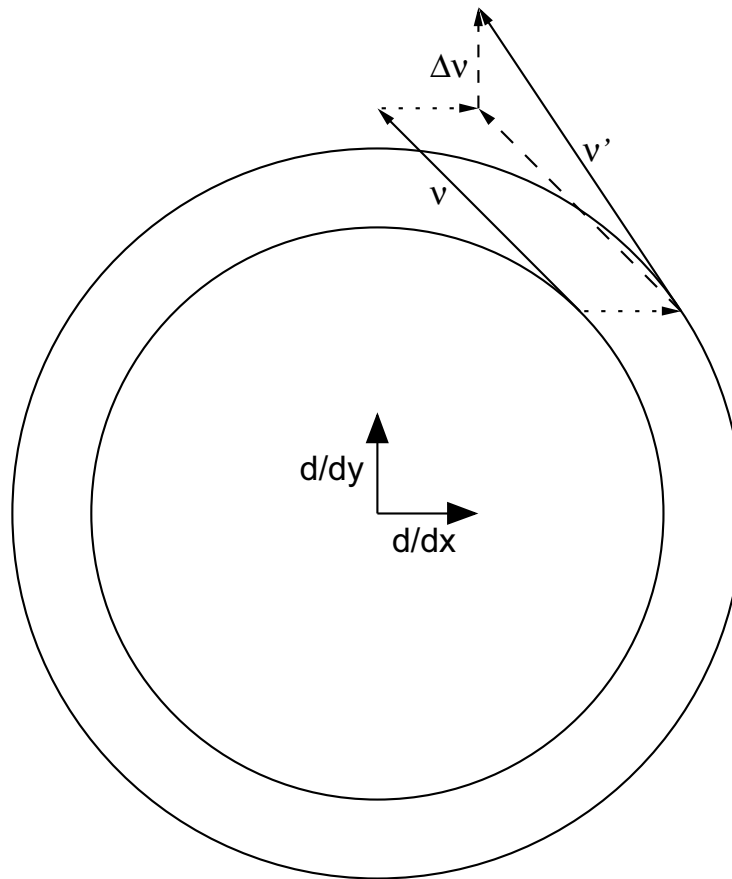

Figure 7.1 If v and v' are “arrow” representations of vectors in the circular field and we parallel-transport v in the $\partial/\partial x$ direction, then the difference between v' and the parallel transport of v is in the $\partial/\partial y$ direction.

```
(define V (literal-vector-field 'V-rect R2-rect))
```

```
(define H (literal-hyperbolic-field 'H-rect R2-rect))
```
